

It is a feed additive with suspension capacity, which prevents feed and supplements from decanting in liquid feeding systems, including low stirring systems.

Properties

SPLF ELITE is a technological additive consists of sepiolite (E-562), made through a specific manufacturing process, with constant quality and the highest purity. Its main characteristics are rheology and suspension capacity. The novel high efficiency at low shear stress of SPLF ELITE allows to develop all its suspension capacity, including basic stirring systems.

Adding SPLF ELITE to feeds produces the following effects:

Technological:

- Soup quality and homogeneity are improved.
- Feed is maintained in suspension and decanting is avoided.
- Blockages in ingredient's distribution are reduced.
- Using the feeding system is easier.

Nutritional:

- Dilution ratios are more flexible.
- Batch homogeneity is promoted.
- Fats are emulsified.
- Food distribution in the trough is optimised, reducing stress and its resulting negative effects (fights and bites).
- Intestinal transit is regulated

Sanitary:

- Microbial contamination in pipes, tubes and troughs is reduced
- Diarrhoea is prevented and faeces consistency is increased
- Expenses on lactation medication are reduced by 50 %.

Fields of application

SPLF ELITE can be used in any liquid feeding system. In addition, it prevents sedimentation and increases palatability in feeds for early stages, milk replacers and formulas. Also valid in drinking water.

Recommendations for use

It is recommended to add approximately 0.5 - 1% of SPLF ELITE depending on the dry matter content in the diet. The dosage of SPLF ELITE can be optimised depending on the ingredients of the diet, by-products and equipment used.

SPLF ELITE can be incorporated in the feed or directly to the soup, although, in this case, it is recommended to stir SPLF ELITE in the water before adding other ingredients.

Contact Data

SPLF ELITE

E-562 Rheological Additive: High Purity for Animal Feeding

Technical Data	
Colour	Light cream.
Appearance	Fluid powder
Conservation	1 year after date of manufacture.
Packaging	22 kg bags.
Storage	Keep it in a dry and humidity-free environment
